About Me

I am a 21-year-old Computer Engineering student with proficiency in Java, HTML, CSS, and JS, experienced in version control with Git and GitHub, and skilled in writing articles on Medium. Additionally, I have strong problem-solving skills, an analytical mindset, the ability to generate innovative ideas, and a team-oriented approach. Eager to contribute my skills and drive progress in the field of computer engineering.

Education

Akdeniz University | Antalya , Türkiye

Computer Science Engineering (English)

2021 - 2026

Current CPGA : 2.90/4.0

Technical Projects

- **Recipe App (Github Link)** : The Recipe Finder application is a recipe app that shows people how to make various dishes and what ingredients are needed. Users can browse recipes by category, add their favorite recipes to their favorites, and view their favorite dishes from their accounts. The app utilizes Jetpack Compose, Firebase Database, and external API integration.
- **Technology Store App (Github Link)** : The technology store application is a system that manufactures, stocks, and ships computer hardware components to various technology stores based on demand. It is built in Java using six different design patterns: Strategy, Observer, Iterator, Composite, Singleton, and Abstract Factory.
- **Weather App (Github Link)** : An application that displays the current weather of any city using an API with an effective CSS design. Coded by HTML,CSS,JS .
